The 2002/2003 Highway Inventory Summaries

The summaries for 2002/2003 are based on the map distance from the GIS base map and the new highway linear referencing system (LRS). The difference in distances from the previous years is less than 0.002%, and is more accurate than the previous methods of measurement (i.e. scaling from plans and maps).

All summaries are based on the 2002 Highway Inventory and are current as of December 31, 2002. Distances are now calculated to 3 Decimals (1 metre). Section and route distances are included.

Section Distance - Sum of all section lengths of a specific highway number in each region. For divided highways this includes both directions.
Undivided, ahead and back directions

Route Distance - Sum all route lengths for a specific highway number in each region. For divided highways the route length (nominal highway distance) is based on the primary control line.
Ahead and undivided directions only.

All section distances are identified in the shaded areas and route distances are in white.

Changes to Highway System

This fiscal year the total length of;

PTH control sections distance increased 0.167 km using the LRS data.

PR control sections increased by 23.140 km using LRS data and due to the following changes to the highway system.

- PR 233 (Repealed) - 1.6 km
- PR 325 (Repealed & Declared) - 3.2 km (net)
